

## 770 nm Laser Diode

### Description

The IDP1064DBR Series of high-power edge-emitting lasers are based on Idealphotonics's advanced single-frequency laser technology. It provides a diffraction limited, single lateral and longitudinal mode beam.

Facets are passivated for high-power reliability. Applications for the 1064 nm laser diode include fiber amplifier seeding, second harmonic generation, spectroscopy, difference frequency generation, and low power DPSS replacement.

### Feature

Available in several package styles

Pulsed operation for spectral stability at short pulse lengths

High power for CW applications

High Slope Efficiency

### Technology

DBR Single-Frequency Laser Chip

AlGaAs QW Active Layer

Epi designed for high reliability

## Handling Precautions

These devices are sensitive to ESD. When handling the module, grounded

work area and wrist strap must be used. Always store in an antistatic container with all leads shorted together.
